PROJECTS AND EXPERIENCE

Full Stack Developer Kalasan ERP **October 2025 – Present**

- Architected and developed a fullstack Enterprise Resource Planning (ERP) application for Kalasan Ayam Goreng Resto. The project utilized React.js, Redux, and CoreUI for a dynamic admin dashboard frontend, seamlessly integrated with a Node.js, Express, and MySQL backend using Sequelize ORM for robust data management.
- Engineered the core Master Data module to manage product inventories and pricing strategies. Built complex and dynamic frontend interfaces like utilizing Formik and Yup for strict data validation and seamless data entry.
- Implemented advanced business logic and data processing features, including a dynamic Product Percentage calculation system to optimize pricing analysis, ensuring accurate synchronization between frontend views and backend controllers.
- Developed and maintained the Purchase Management system, streamlining procurement processes by building robust backend RESTful APIs to handle purchase tracking and inventory restocking efficiently.
- Conducted thorough system debugging and performance optimization, successfully identifying and resolving critical issues such as double-input validation bugs. Improved overall application stability, data integrity, and user experience by implementing strict request handling on the server.

Full Stack Developer Pakaryan Heavy Rent Project ***October 2024 – May 2025***

- Architected and developed a full-stack web application from concept to deployment. The project utilized Next.js, TypeScript, and Tailwind CSS for a high-performance, responsive frontend, with Supabase providing the PostgreSQL database, authentication, and backend services. This combination resulted in a robust and fully integrated platform.
- Engineered the core rental marketplace feature by designing an efficient database schema for Equipment, Bookings, and Users. The system was built with a dynamic and modular user interface using reusable components like EquipmentCard and SearchBar to efficiently display and filter data based on type, brand, location, and availability.
- Implemented a comprehensive and secure user management system using Supabase Auth, enabling seamless user registration and login. A private User Dashboard was developed to allow authenticated users to view and manage their booking history and profile details, directly connecting frontend components to backend logic.
- Ensured robust integration between the client and server to enable key functionalities. This included an interactive multi-step booking system, real-time updates on equipment availability, and secure data handling, all of which were critical for a smooth user experience.
- Successfully executed a scalable deployment strategy, with the frontend hosted on Vercel and the backend services managed by Supabase. This established a reliable and scalable platform capable of supporting future features such as Google Maps integration and real-time notifications.

Full Stack Developer Housettle Web Project ***January – August 2024***

- Built and configured a full-stack development environment using the MERN Stack (MongoDB, Express.js, React.js, Node.js), and set up frontend libraries like Bootstrap to create a solid and scalable application foundation.
- Designed and developed a responsive user interface with reusable components (Header, Hero, buttons), while simultaneously implementing backend CRUD operations using Mongoose for models such as Categories, Items, and Banks.
- Developed comprehensive content management features by creating an intuitive admin dashboard, complete with secure user authentication and session management to ensure protected access control.
- Created a complex user flow for the Checkout page by designing a custom stepper component on the frontend, supported by a robust API on the backend to handle booking and data details, ensuring a seamless transaction process.
- Deployed the integrated frontend and backend applications to Vercel, and tested all APIs for the landing, detail, and booking pages to deliver a cohesive, functional, and reliable user experience.

CERTIFICATE AND TRAINING

Introducing Frontend Meta | Coursera **2022**

- Distinguish between frontend, backend and fullstack
- Create and style a webpage with HTML and CSS
- Explain the core and underlying technologies that power the internet
- Explain what React is

Programing with Javascript Meta | Coursera **2022**

- Demonstrate how to write JavaScript code inside the browser
- Explain the importance of JavaScript in software development
- Demonstrate how to write basic Javascript code: list common operators, conditional statements and loops
- Demonstrate how to use variables and output their values in the console

Version Control Meta | Coursera **2022**

- Describe how modern software teams collaborate and work on the same codebase
- List different version control systems and methodologies
- Illustrate a standard software development workflow
- Navigate and configure using the command line
- Use and create github repository

HTML and CSS in depth Meta | Coursera **2022**

- Create a simple from with a responsive layout using HTML and CSS
- Create a responsive layout using CSS
- Create a UI using Bootstrap
- Implement debugging tools

React Basics Meta | Coursera **2022**

- Use reusable components to render views where data changes over time
- Organize React projects to create more scalable and maintainable websites and apps
- Use props to pass data between components. Create dynamic and interactive web pages and apps
- Use forms to allow users to interact with the app. Build application in React

Responsive Web Design | FreeCodeCamp **2022**

- Learn and improve knowledge HTML, CSS and Bootstrap
- Design web to be responsive on several devices
- Complete several task related to HTML and CSS
- Build several web page projects

Javascript Algorithms and Data Structures | FreeCodeCamp **2022**

- Learn and improve knowledge Javascript
- More deep in to logical and data structure in Javascript
- Complete several task related to Javascript
- Manage, analyses, create data structure in Javascript
- Build several web page projects

ORGANIZATIONS

Health and Safety division on Students Orientation Committee ***Jun 2018 – Sep 2018***

- Managed and prepared logistic in medical needs for candidate students, other divisions committee lectures andguest stars.
- Coordinate with other divison for strong communication and cooperation
- Maintain the event went well by supervising on the field refers to schedule and jobdesc

Guiding Division on Togetherness Science Week Department ***Apr 2017 – Nov 2017***

- Guiding candidate students during the event to keep on schedule and lead the candidate studentswhere and whento go
- Coordinate and cooperate with other divisions to prevent miscommunication during the event
- Have a certain attitude with candidate students in order to build well communications and togetherness

EDUCATION

Universitas Islam Indonesia (UII) | Civil Engineering ***Aug 2016 – Jul 2021***

Area of Interest : Structure Design, Building Constructions, Consultant Engineer

- Graduated title *Cum laude* with GPA 3.67
- Teaching Assistant for Structure Analyze basic and Concrete Structure Advanced
  Thesis : Comparative Study of Structural Response on Multi-story Buildings with Shear Wall and Bracing Systems

LANGUAGES

- Indonesia (Native)
- English (Fluent/Professional)

SKILLS

React JS | HTML | Javascript | CSS | Bootstrap | Github | Figma | Microsoft | Web Developer | Frontend
